

25th WORLD ENERGY CONGRESS SESSION MAPPING

How will the 'next' normal impact global energy transition?	Why is humanising energy an imperative in this decade of delivery?	How might tipping points and transition crisis risks accelerate or derail progress to 2040?	Preparing for the customer-centric energy future – what are the implications for market and policy design?	Which new leadership mindsets and models are impacting energy developments?	What new models of financing and investment in energy are emerging and why?
Recovery, resilience and renewal: Building forward together	World energy communities' movement: Enablers of energy transition	The 'power couples': Energy transition + digital transformation	Non-toxic molecules revolution	Leadership: The certainty of uncertainty	Who pays? The full costs to society and pain points of whole energy transition
(Re)imagining energy society/ies: New context, new players	New energy behaviours	New energy ecosystems: orchestration and scalability	Policy designs for a clean and just energy transition	Navigating the new geo-politics and socio-politics of energy	Investment dynamics: Getting serious about the energy trilemma in rebalancing ESG
New frontiers - Energy for People, Planet and Space	Decade of delivery – Mobilising the middle and creating a 'road builders' movement	Navigating new energy maps	Hydrogen economy: Managing the 'how to' of a global clean energy vector	Cities to the rescue: Transforming and performing	Managing the risks of faster stranding: Assets, jobs and communities
How do regional realities differ and what can we learn from this?	Covering the increasing diverse energy transition realities from across the world's regions, cities and communities.
